

MOBA is a leading global manufacturer of equipment for the egg industry. The new head office in Barneveld shows that innovation is in the company's DNA. User experience, comfort and energy efficiency are central to the design and the building management system. TH Klimaatbeheersing provided the complete climate system for the new office area with company restaurant and the existing production areas.

OPTIMUM COMFORT

Although the new climate control system goes beyond the current sustainability regulations, saving energy is not the primary objective. It is mainly about the comfort of the employees.

ENERGY-EFFICIENT COOLING

The factory area is the only place where the climate is controlled centrally. Robert: "A project with automatic cooling was recently initiated, to improve the indoor climate for the production staff even further.

IN THE CLOUD

Since this renovation, MOBA has been using Priva cloud services. Now all the technical services staff can view and manage the system remotely, even with their smartphones.
