## Challenge

St Paul's Cathedral, London's iconic 340 year old church realized that its plant room equipment was in need of replacement in order to improve energy efficiency, enhance reliability and meet high heating and hot water demands.

## Solution

Priva Blue ID S-Line controls were duly selected for the main boiler room at St Paul's where they now control four new boilers and the primary boiler pumps. With these improved controls, in periods of low heat demand, the boilers are not constantly cycling and wasting energy.

## Benefits

The benefits of the revamp include increased reliability, and better scalability and flexibility for future modifications. Naturally, there are likely to be significant energy savings too, as a result of enhanced temperature control.

Priva Blue IDS-Line and C-Line controls have been installed as part of the major BMS retrofit project at St Paul's Cathedral in London. The installation, which was part of an overall plant room refurbishment, gives the cathedral complete control over its temperature requirements from radiators/heating coils and the hot water system throughout the building. A new front-end based on Priva UK's integrated, web-based TC Manager, which is accessible from any PC with internet access, ensures authorized staff can change preset temperatures or on/off times at the click of a button.
