

PRIVA'S CPD EXPLAINS CONNECTION BETWEEN HUMAN WELLBEING AND THE ROLE OF CONTROLS

A new CPD entitled: Investment in Wellbeing: The Role of BMS Controls & Cloud Services is now available from Priva UK.

Friday, February 21, 2020

CIBSE-accredited, Priva's new CPD is full of useful statistics and market insight on the factors that are driving the global trend for wellbeing and healthy buildings.

The company has prepared a new CPD which responds to this market-led demand for solutions and ideas. It explains the changing shape of the property market. And, it uncovers how modern cloud-based BMS solutions can be used to create an environment where business and people can thrive.

The CPD also offers a useful overview of the powerful analytical and visualisation tools that encourage cooperation between clients and service providers. All aspects of building and human health including CO2 concentrations, indoor air quality, thermal comfort and lighting are covered – and useful research references are given on the ways each of these building services functions can impact on human health and productivity.

“We are witnessing a very sharp rise in interest – and demand for – healthier workplace environments,” says Priva's Gavin Holvey. “This isn't simply from end users, it's from property owners/investors looking for 'value add' for their buildings. We felt it was important to help more of our stakeholders – particularly at the consulting engineering level – understand the part that controls and cloud-based technology can play in delivering optimal 'human centric' spaces. Our new CPD is a key part in our strategy to get this message out there.”

For anyone interested in attending a presentation of the CPD – either at their own offices, or at Priva's UK base in Watford - please [get in contact](#) with the Priva office.
