

Priva APIs (Real-time & Historical data + Notifications)

Building connectivity between systems and software

If you want to get the most out of your data, you need quick and easy access to it. With Priva APIs (Application Programming Interfaces), including Real-time and Historical data APIs as well as Notification APIs, you can easily connect third-party applications, or your own software, to your building data. The Priva APIs are easy to use. You perform the set-up yourself and decide which software can access which data and from which building.

Why Priva APIs

- **Easily connect third-party software**
Easily connect third-party software to your building's historical data with the Historical data API.
- **Access to live data**
The Real-time data API allows you to exchange data in real-time with third-party applications and connect directly to live building data.
- **Centralise alarm management**
Notification API ensures alarm management is centralised and that notifications are sent without delay, streamlining clear technical communication.

- **Access management & API configuration**
Manage API access and easily select which buildings the API is available for.

Advantages of Priva APIs

- **Complete control**
No re-engineering or access to the local system is needed to change data availability. Easily connect any application to your building data.
- **Fast and reliable access**
Everything is controlled online in seconds. That's faster, more cost-efficient and more secure.
- **Increased efficiency**
Manage comfort in your building and increase the speed with which malfunctions are resolved to avoid complaints with centralised alarms.
