

Priva Notification Center

Always insight into your alarms

Your business never stops, so you want to know immediately if there is an issue with a system in your greenhouse. With Priva Notification Center you are always informed of all current and historical alarms in your greenhouse. It alerts you when an alarm is activated and gives you detailed information, wherever you are. In addition, you can switch directly to Priva Operator and change settings to solve the issue.

Benefits of Notification Center

Insights on the go

Receive notifications of alarms, wherever you are.

Remote control

Respond immediately to an alarm via Operator, where you can adjust settings.

Get started right away

No local installation required.

Why use Notification Center?

- **24/7 alarm information:** A clear overview of current alarms ensures that you always have insight into issues and incidents that are important to your business operations.
- **Act immediately:** If an alarm occurs, you can take immediate action. Acknowledge the alarm and adjust settings via Operator, so that everything continues to run efficiently in your company.
- **Customize to your needs:** Receive notifications the way you want via email or push messages. In addition, you can turn off certain notifications or disable alarms, if they are not urgent, for example.

Always insight into alarms wherever you are

It is important for your operations to always have insight into current alarms, whether you're at home, in the greenhouse or on the road. With Notification Center, you will always receive notifications of alarms. You receive the notifications via email or push message. This way you are always notified when an alarm occurs and you can even quickly respond to incidents. You can switch directly to Priva Operator and change settings.

Overview of the most important alarms in an up-to-date view

Some alarms do not require immediate action. With Priva Notification Center, you can switch off notifications permanently or temporarily (1 hour or 8 hours). It is also possible to remotely deactivate the alarm bell. In addition, you can acknowledge an incoming alarm instantly. This keeps the list of alarms relevant and other colleagues know which alarms are already being dealt with.
