# Priva Analytics

## Easily create and share building data reports

*With Priva Analytics, you receive data reports from the building management system quickly and easily, with in-depth insight into key performance indicators (KPIs). These KPIs provide valuable information on the performance of building systems, allowing you to monitor and optimise efficiency. Do you have a maintenance or support contract with your client? Then automatically share reports with them at a set time. You select the data points and KPIs you are interested in, decide how you want to display them (e.g. in graphs), and choose with whom you want to share the reports. After this configuration, you are done in one go, ensuring efficient communication and proactive maintenance.*

## Why Priva Analytics

- **Save time and money**
  Easily create and share your data reports yourself.

- **Share with whom you want**
  Create different recipients and share information at your chosen time.

- **Always insight**
  Get historical insight into the operation of your building management system, making anomalies immediately visible.

## Advantages of Priva Analytics

- **Insight**
  Priva Analytics gives you even more insight into the data and operation of the building installation

- **Periodic reports**
  Automatically share your reports with selected people at set times.

- **User-friendly**
  Easily create your own reports from the available data with just a few clicks.
