

The footprint of

Challenge: due to charging EV's, we use more -grey- electricity

New goal: to reduce the CO₂ emissions with 47% in 2028 compared to 2021

Footprint today?

Ton CO₂

Our emissions are equal to

- Annual gas consumption of 13 households
- 35 return flights to New York
- 8 times around the earth by car
- Growing 3.215 trees for an entire year

Footprint

64.3 ton CO₂

1,68 GWh green energy
-main office-

Scope 1: 38,1 ton

Scope 2: 24,8 ton

Business travel: 4,2 ton

Scope 1

Direct emissions from owned or controlled sources, like fuel.

Scope 2

Indirect emissions used by the organisation, like purchased electricity.

Business travel

Work-work transport

Our actions to reduce CO₂

- Using 100% green energy of Dutch origin
- Demotivating the use of (polluting) private cars for business purposes by offering fuel-efficient lease cars
- Purchasing fuel-efficient and electric cars
- Reducing the electricity consumption of the Campus as much as possible
- Encouraging working from home
- Facilitating remote meetings

Concern

- We drive more and more electric and have a larger carfleet compared to 2021 , therefore our grey electricity consumption increased.

Priva in society

As a company, we share our knowledge, inspire other companies and help anyone who wants to know more about sustainable building automation. We initiate **Sustainable Urban Delta** and we join **Dutch Green Building Council**

SUSTAINABLE URBAN DELTA

What can you do?

- Charge your car at the office (green electricity)
- Inflate your tires every 2 months
- Stick to speed limits
- Eat less meat and dairy
- Switch off machines when not in use
