

## BUILDING MAINTENANCE SERVICE PACKAGES

### BUILDING MAINTENANCE TAILORED TO YOUR NEEDS

With the Priva Building Maintenance Services packages you can manage your building in a remote and safe manner. Our services allow you to analyze performance, manage and react to building alarms and notify the right people when necessary. On top of that, the Priva BMS packages enable you to visualize historical data. Via the Historical Data API, data becomes available anywhere, anytime - which lets you get the most out of your data.

➤ Easily maintain your building

➤ Available anywhere and anytime

> Always up to date and securely connected

> Three different packages – select what fits your needs

## What's included?

From experience we know that each customer is unique. For that reason, we make it a priority to serve everybody's needs with our solutions. When developing the Priva BMS packages we therefore decided to develop three different packages:

- The Essential package
- The Plus package
- The Premium package

The API is an available option on the Plus and Premium packages.

<i>What's included?</i>	Essential	Plus	Premium
	Manage	Troubleshoot	Analyze
Remote Management	✓	✓	✓
Cloud History	3 months	26 months	26 months
Priva Alarms		✓	✓
BI Metrics			✓
APIs	€	€	€
Service	✓	✓	✓

WANT TO FIND OUT HOW PRIVA BMS PACKAGES ALLOW YOU TO EMPOWER YOUR DAY-TO-DAY OPERATIONS?

Advantages

### **Access anywhere, anytime**

Access your building and its historical data remotely. The system continuously and automatically updates itself, notifying you whenever an alarm is triggered, regardless of your location.

### **Fully integrated**

Cloud history enables you to visualize the stored data in TC Engineer, TC Manager and TC Operator. Moreover, it will be possible to visualize and use that same data in future Priva services.

### **Connect with external software**

Our Historical Data API allows you to save your historical data externally or use it in third party software. The API is a cloud-based interface hosted by Priva that enables external software to access data stored in Priva Cloud History. Data never travels without your permission, of course.

### **Easy management**

Priva Services are automatically updated and require no local infrastructure other than the Priva Cloud Connector. This makes the set up and management of these services easy and cost-effective.

### **Secure and safe connection**

The Priva Cloud Connector ensures a secure connection to Priva services, using Microsoft Azure. There is no open connection or VPN tunnel that can create a data leak, assuring a secure and safe connection.

## **MORE ABOUT SECURITY OF THE CLOUD**

The security of our services is of great importance to us. Therefore, we put a lot of work into securing our cloud solutions. Would you like to know more about how Priva Services are secured? We'll happily provide you with relevant documentation and the answer to all of your questions.

## Why use Priva's digital services?

**ONE** solution

**ONE** user experience

**ONE** secure sign-on

**ONE** online platform

For **ALL** day-to-day operations

**ARE YOU INTERESTED AND WOULD YOU LIKE TO HAVE DOCUMENTATION ON HAND?**

INTERESTED?

Leave us a note and we will tell you all about the possibilities!
