

> Safer, cleaner and more comfortable buildings

Facility Management the easy way

It's a well known fact that people feel better and perform better when they work in spaces where personal comfort is a priority. Buildium Comfort Management makes this possible. It offers a powerful, holistic and digital way of optimizing the operation of the climate control functions in your buildings.

> Keeping in touch

Buildium helps you to stay in constant contact with your building users. You can use this feedback to tailor the building to their needs as accurately as possible.

> Occupancy rates managed

Buildium removes the need for time-consuming manual registration of occupancy levels and density ratios which saves time and delivers greater insight.

> Hybrid working made easy

Your employees are able to log-in at any time, from any location and on any device. Even if they're home-based, they can still get visibility on the busiest periods in the office.

> **Optimizing workflows**

With Buildium, you can ensure information reaches the correct person, team or even third-party supplier directly. This cuts out any unnecessary email conversations and potential loss of information.

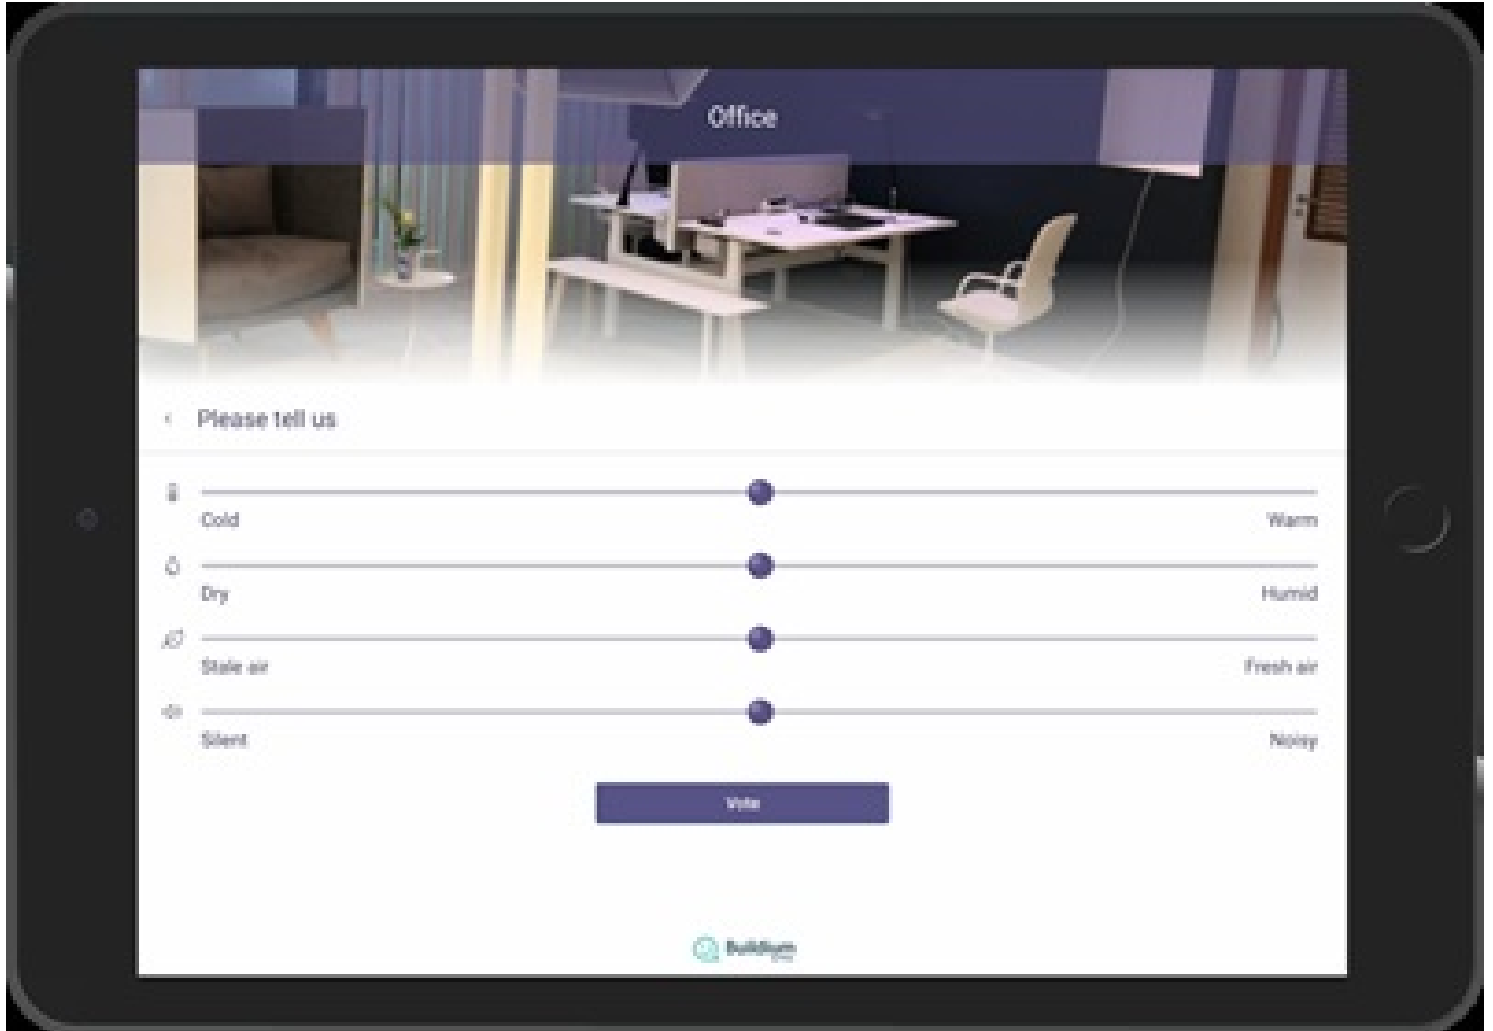

Creating environments where people can thrive

Buildium Comfort Management is a smart cloud-based system designed to help building and facilities managers provide better managed, healthier and comfortable workplace environments where people are able to grow, flourish and operate at their best.

The exciting thing is you can use Buildium Comfort Management to easily alter individual comfort settings without disturbing anyone. Plus, there is no need for complex and expensive changes to the installation. The result: more individual comfort, less energy consumption and lower installation costs.

Want to know more about Buildium Comfort Management?

How does it work?

No software to install

Buildium Comfort Management is accessible via the web. As a result, there's no need for building users to install any third-party software or apps.

6-digit security code (on Room Control Function)

Buildium Comfort Management is easy to roll out for any company. Building users can get started by creating their own personal 6-digit access code via the Priva Portal.

Why use Buildium Comfort Management?

ONE solution

ONE user experience

For comfort & well-being

Buildium Comfort Management is part of our Priva Digital Services Suite. For more information on our full portfolio of Digital Services and our wide range of plans, [click here](#).

Easy access

Get a really clear overview of your HVAC data with our user-friendly interface.
