

PRIVA BLUE ID C-LINE

STATE-OF-THE-ART BUT AFFORDABLE HVAC-CONTROLLERS

Priva Blue ID C-Line

Looking for compact, state-of-the-art but affordable HVAC-controllers for smaller projects? The Priva Blue ID C-line is ideal for primary schools, smaller office blocks and projects with many various locations. It helps you to improve the climate control and save energy at the same time.

> Small in size great in performance

Powerful and compact state-of-the-art controllers

> Value for money

The Priva quality at a competitive price

> Efficient

Saves energy and also stores your data

Compact

The compact Priva Blue ID C-line can be placed horizontally and vertically. It can be placed in almost every electrical panel, even there where little space is available. This makes it ideal for renovations. The low voltage makes the Priva Blue ID C-line extra energy efficient.

Simplicity through integration

It is easy to install the Priva Blue ID C-line. The main controller has everything you need: a powerful microprocessor, various in- and outputs, an integrated webserver and four Ethernet ports with switch functionality. If you wish you can extend the main controller with three more options: a mixed I/O module, a universal input module and a relay output module. The controller can always be integrated in the existing power circuit.

Freedom of choice

Because the project software is your property, you are totally independent when it comes to your choice of a Priva Partner for service and maintenance of your installation

Independent

The Priva Blue ID is independent of field equipment. Existing field equipment and cabling can be reused. This also allows the right equipment to be applied for your project.

Internet of Things

Priva Blue ID can be accessed both locally and via the internet. This can be done in combination with cloud technology or via a secured connection such as VPN. Because all communication is based on IP-technology, the controllers are prepared for the Internet of Things.

EFFECTIVELY AND EFFICIENTLY MANAGE YOUR INDOOR CLIMATE?
